

DLMPS-400A Mini Mechatronics System

■ Overview

- The system is composed of distribution station, testing station, handling station and sorting station.
- PLC is master controller, realize configuration monitoring by the PC.
- An external interface for different types of PLC, can carry on secondary development.
- External interface can connect with MCU to program and control.

■ Technical Parameter

- Total dimension: 3600×790×1280mm
- Input power: single-phase, three-wire AC220V±10% 50Hz/60Hz
- Output power: AC 220V safety socket
- Capacity: < 2KVA

■ Optional

- Computer, computer table
- PLC module
- Air compressor
